

# TutorTools

## Co-Tutor

### Co-Tutor

is an online database system that provides a straightforward way for tutors to record and view their student's tutorial progress. To begin using Co-Tutor, visit <http://co-tutor.lboro.ac.uk> and login using your usual Learn username/password.

A separate leaflet is included in this engCETL pack giving more information on Co-Tutor.

## Attendant

### Attendant

is an easy way to create and take registers for the classes you teach. To begin using Attendant, visit <http://attendant.lboro.ac.uk> and login using your usual Learn username/password. A quick start guide is also available from the website.

A separate leaflet is included in this engCETL pack giving more information on Attendant.

## ProjectList

### Projectlist

is an online project and dissertation allocation system for undergraduate and postgraduate students. It is designed to help manage the process of academics proposing final year or postgraduate individual projects and the students viewing and selecting them. Academics use it to manage a list of projects, as their allocation to students can be problematic. To begin using ProjectList, your Loughborough University department needs to register so we can set up a customised area for you. Please contact Paul Newman in engCETL for more details ([p.m.newman@lboro.ac.uk](mailto:p.m.newman@lboro.ac.uk)) or take a look at the website <http://projectlist.lboro.ac.uk>

## Web-Groups

### Webgroups

is an online collaborative environment designed to support group and team-work activities. You can create group work areas with discussion board/forum functionality and split them between different groups. These groups can be comprised of any mix of students, staff and even external/industrial supervisors and mentors. To begin using Web Groups, visit <http://webgroups.lboro.ac.uk> and login using your usual Learn username/password.

## WebPA

### WebPA

is an online peer assessment system that utilises a peer-moderated marking system. It is designed for teams of students undertaking group-work, with each student grading their own and each team-mate's performance within the group. This grading is then used in conjunction with the overall tutor allocated group mark to provide students with individual grades that reflect their contribution to the group activity. To begin using WebPA, visit <http://webpa.lboro.ac.uk> and login using your usual Learn username/password.

WebPA has a long development lifecycle, which is detailed below. It is currently being developed and promoted as open source software by a JISC funded project team: [www.webpaproject.com](http://www.webpaproject.com)

# TutorTools

As part of a recent upgrade a TutorTool homepage was introduced, that gives a status update for the user on all of the five tools that they are registered for. Visit <http://tutortools.lboro.ac.uk>. The screenshot below provides an overview of the homepage.

Here are engCETL's suite of tools for Loughborough University members of staff to help enhance their teaching and learning practise and save time on administering teaching and learning processes.
